

RIVERBED STEELCONNECT & ZSCALER

The cloud provides flexibility, efficiency, and agility to achieve digital transformation faster and without upfront capital investments.

Unfortunately though, legacy networking and security infrastructure weren't designed to efficiently deliver cloud apps and services, especially for today's distributed enterprises where most business is conducted in branch locations.

As a result, SD-WAN and cloud security have emerged to help unlock the cloud's full potential.

Combining SD-WAN with a cloud security solution can take cloud adoption to the next level, which is why Riverbed and Zscaler have partnered to offer the most complete, seamlessly integrated cloud networking and cloud security solution on the market.

This means you can accelerate cloud adoption

in pursuit of your digital transformation goals without compromising application security.

HOW IT WORKS

The simplicity and agility of Riverbed SteelConnect SD-WAN plus the power of Zscaler security enables you to build a true, cloud-first architecture.

Here's how it works.

With Riverbed SteelConnect at the branch, outbound traffic can flow across the best available network - including low-cost Internet connections.

Riverbed SteelConnect optimises the connection path based on availability, latency and application and establishes virtual secure links across locations.

You can also direct traffic flow on an application-by-application basis.

By establishing a secure IPsec tunnel between Zscaler and Riverbed SteelConnect, you have the flexibility to route internet-bound traffic to Zscaler to inspect, secure, and protect your data.

INTEGRATION BENEFITS

- Securely transform to a cloud-enabled enterprise.
- Increase IT agility and responsiveness to business needs.
- Simplify operations and reduce costs associated with appliances and MPLS backhauling.
- Provide a fast and secure user experience.
- Inspect all employee traffic to and from the Internet.
- Implement application-aware WAN and security policies.
- Enforce security policies that follow the user, no matter where they connect.

RIVERBED STEELCONNECT

Riverbed SteelConnect leverages the principles of software-defined control to provide:

- Simple but powerful workflows for policy definition based on Applications, Users, Sites, Performance and Security.
- Single-click setup of SD-WAN and application acceleration capabilities in Microsoft Azure and AWS cloud environments.
- User-to-server control, wherever the user (static or mobile) or server (cloud or on-prem) might be.
- Scalability for large environments, including data centres. No rip-and-replace needed.
- Integrated application acceleration and visibility capabilities, provided as a single-box, dual-box, virtual or cloud-based solution.

ZSCALER

Zscaler's Cloud Security Platform delivers superior security without the cost and complexity of on-prem security appliances.

Zscaler provides security as a cloud service, with Cloud Sandboxing, Cloud Firewall, Data Loss Prevention (DLP), and more.

You no longer need to put a security perimeter around every office. By simply redirecting Internet-bound traffic to Zscaler, you can instantly secure branches and remote locations.

Because Zscaler is positioned between users and the Internet, every byte of traffic is inspected - even if it's encrypted or compressed - and users are secure wherever they connect.

GET IN TOUCH

As an experienced and certified partner of both Riverbed and Zscaler, Teneo has architected the Riverbed SteelConnect and Zscaler solution in our SD-WAN lab environment so you can see the integration in action.

We'd be happy to demonstrate to you and your team how this solution works in practice.

The topics of cloud security are covered at length in our SD-WAN Workshop. Please get in touch if you'd like to schedule a workshop with us.

The Riverbed SteelConnect and Zscaler integration will be architected specifically for your environment by Teneo during the design phase of your SD-WAN migration.

To discuss this integration further, please contact us at info@teneo.net or via our website at www.teneo.net.
